THIS SELECTION CONTAINS	24 x Not Scented Begonia ‘Super Cascade’ Plug Plants with yellow, orange, red, pink and white flowers
ON ARRIVAL	<div></div> <ul style="list-style-type: none"><li>Keep trays indoors in a well-lit, draught free area for 24 hours.</li><li>If the compost is a little dry, stand the tray in shallow water. Or spray water lightly over the tray and then place in a position where there is adequate airflow to dry the excess water from the leaves.</li><li>Once the compost is moist allow the tray to drain.</li><li>There may be some loose compost or a slight yellowing of the leaves which is a consequence of the plants being shipped. This will not affect the condition of the mature plants.</li></ul>
WHERE TO PLANT	<ul style="list-style-type: none"><li>Plant straight into containers and grow on for a week or two before planting out.</li><li>Give your plants a good water initially, then only when the top compost starts to dry.</li><li>They don’t like to be left in standing water.</li><li>When planting out, space each approximately 20cm apart to allow room to grow.</li><li>Feed using a high-potash feed to encourage flowering.</li></ul>
WATERING	<ul style="list-style-type: none"><li>Check and water containers every day in summer unless the compost is wet.</li><li>Aim to keep the compost moist but not soggy and avoid wetting the foliage and flowers.</li></ul>
PRUNING / TRIMMING	<ul style="list-style-type: none"><li>Deadhead when flowers fade to encourage more blooms.</li></ul>
FEEDING	<ul style="list-style-type: none"><li>From March to June, apply a general-purpose liquid fertiliser once a week.</li></ul>
WINTER CARE INSTRUCTIONS	<ul style="list-style-type: none"><li>If you want to keep your begonias for next year, carefully lift them before the first frost.</li><li>Pot them up and bring them into a cool, frost-free place such as a greenhouse, conservatory, or a bright windowsill.</li><li>Trim back any straggly growth and reduce watering to prevent rot, but don’t let the soil dry out completely.</li><li>They may continue to produce some foliage indoors or may enter a dormant state depending on temperature and light levels.</li><li>If you prefer to leave them in the ground, cut back the plants to just above soil level before the first frost.</li><li>Apply a thick mulch of dry leaves, straw, or compost to insulate the roots.</li><li>Be aware that without a tuber, these plants are less likely to survive a harsh winter, particularly in cold, wet soils.</li></ul>
CONTAINER SIZE + RECOMMENDED NUMBER OF PLANTS PER CONTAINER	<ul style="list-style-type: none"><li>A larger container is recommended to encourage bigger and healthier plants to grow. Aim for 45cm diameter.</li></ul>
